

EMAIL CAMPAIGN PROJECT 4 REPORT

For my email, I brought in some interactive features to make it less basic and show more advanced styling. I used 2 column and 3 column layouts, media queries for mobile stacking, hover effects on buttons, a checkbox style FAQ section, radio button tabs, and a small keyframe animation. After building everything, I validated the file using the W3C Nu HTML Checker. It passed without major structural errors a few things here, mostly syntax, but there were some expected warnings related to table based email formatting but when I looked it up it said that could be ignored. At one point, I forgot to close a table cell, which the validator caught immediately, and I fixed that.

When I tested the email in Gmail Web, Gmail Mobile, and Outlook Web, I ran into a few consistent issues:

- Checkbox FAQ interaction did not function properly
- Radio button tabs did not switch content as expected
- Keyframe animation did not run

Quick intro — Justin Kalski

I'm a CSUN CS senior and I work in IT at LADWP.

If you want to see my work, my portfolio is the best starting point.
This div is incorrectly nested inside a paragraph.

[Open GitHub](#)

might see some overlap with my hnd assignment since I reused the same content, but I updated the design and structure to be more email friendly and to meet the new requirements.

A bit more about me

What I do

IT support + web dev + integrations. I like projects where I can build, test, and ship improvements quickly.

Recent work

Wallet passes, OCR-style forms, and school projects that focus on real constraints (teams, fairness, scheduling).
[Portfolio link](#)

What you can expect

Build

I can take a feature from idea → working version.

Debug

I'm patient with problems and I document fixes.

Communicate

Updates that are clear and not vague.

If you're hiring

I'm aiming for roles where I can grow fast and keep shipping.

Quick questions

☐ What should I click first?

My portfolio! It's the cleanest overview and it links out to projects and my resume!

☐ What roles am I looking for?

Quick questions

☐ What should I click first?

My portfolio! It's the cleanest overview and it links out to projects and my resume!

☐ What roles am I looking for?

IT support / IT analyst roles and entry-level dev roles (especially web + integrations) would be fire.

☐ Why does this open/close?

it meets the requirement for an interactive element.

☒ Projects

☐ Experience

☐ Resume

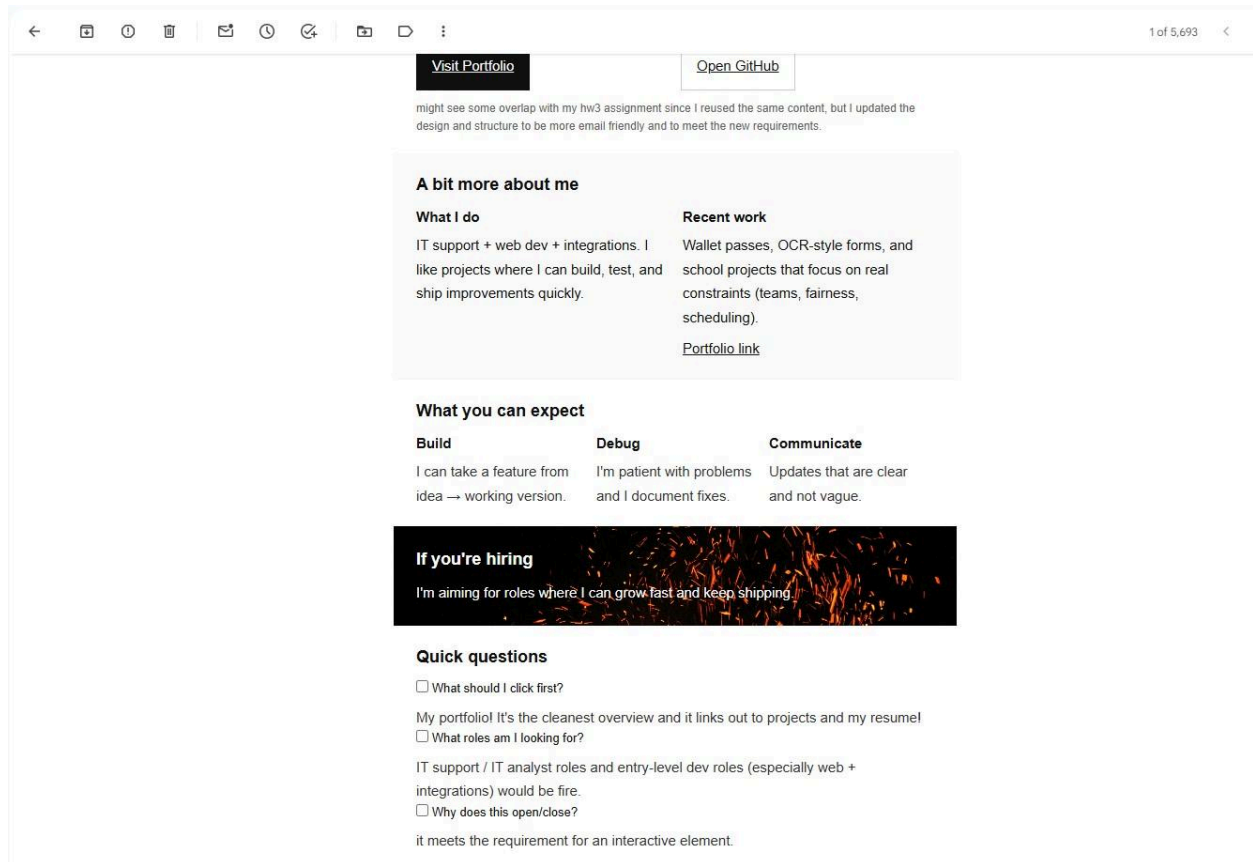

Projects are linked from my portfolio site. [Open portfolio](#).

I work IT at LADWP and I've built web features for projects/internships (integrations, APIs, deployment stuff).

My resume link is on my portfolio site. [Resume link](#).

- Hover effects did not work on mobile (expected limitation)
- Background image support was inconsistent in gmail
- Some advanced CSS selectors were ignored by Gmail.

After revisions:

After testing, I adjusted table spacing, simplified some styling rules, ensured all images were hosted with full URLs, and cleaned up minor markup inconsistencies. The layout and responsiveness worked well overall, but the advanced interactive features were limited due to email client restrictions rather than coding errors.
